PROFILE

Kuwaiti Electrical and Electronic Engineering graduate pursuing an MSc in Cyber Security, with experience in applied research, data analysis, technical writing and project delivery. First-place winner in Warba Bank's ROWAD Innovation Program, where technical and financial findings were turned into a practical recommendation for senior stakeholders. Interested in Kuwait's economic development, digital transformation and the work of international institutions.

EDUCATION

City St George's, University of London

MSc Cyber Security

London, UK

Sept. 2026 – Sept. 2027 (expected)

Queen Mary University of London

BEng (Hons) Electrical and Electronic Engineering

London, UK

Sept. 2023 – July 2026

- Upper Second-Class Honours (2:1), awarded 9 July 2026.

- Selected results: Python Computing – First-Class (A); Programming Fundamentals – First-Class (A); Modelling and Performance – First-Class (A).

Queen Mary University of London

Foundation Certificate in Science and Engineering – Distinction

London, UK

Sept. 2022 – June 2023

EXPERIENCE AND ACHIEVEMENT

ROWAD Innovation Program 6.0 – First Place Winner – £10,000 Prize

Sept. 2025 – Dec. 2025

Warba Bank

London, UK

- Co-developed a fintech product concept and presented it to senior bank stakeholders, placing first among six competing teams.
- Built break-even models, analysed rollout logistics and operational risks, and translated the findings into a practical recommendation for a non-technical decision-making panel.

RESEARCH AND ANALYTICAL PROJECTS

Real-Time Sound Localisation on a Resource-Constrained Microcontroller

Sept. 2025 – May 2026

8051 microcontroller, C, sensor instrumentation, Time Difference of Arrival (TDOA)

- Designed and tested three embedded prototypes, then collected and analysed performance data across 70 structured tests.
- Diagnosed recurring timing, threshold and interrupt faults and documented the methodology, limitations, findings and recommendations in a 105-page engineering report.

Automated Personal Analytics and Internet of Things (IoT) Bot

Nov. 2025 – Dec. 2025

Python, GitHub, Bluetooth-connected data and Microsoft Excel

- Built an automated workflow to collect, validate and organise device data, then produce scheduled summaries and goal-based performance reports.

Autonomous Obstacle-Avoiding Line-Following Robot

Jan. 2025 – June 2025

Arduino, C, sensors and motor control – First-Class project grade (A)

- Led task allocation and milestone tracking, integrated technical workstreams, presented the final system and authored the technical report.

SKILLS AND INTERESTS

Research and analysis: Data collection and validation, quantitative analysis, break-even modelling, risk identification, performance evaluation, structured research and report writing.

Technology: Python, Microsoft Excel, MATLAB, GitHub, C/C++, Linux, automation, data visualisation, embedded systems and digital workflows.

Professional: Technical writing, stakeholder presentations, project coordination, team leadership and communicating complex findings to non-technical audiences.

Languages: Arabic – native/professional; English – fluent/professional.

Interests: Kuwait's economic development, digital transformation, fintech, international development, private artificial-intelligence systems and Brazilian jiu-jitsu.
